

Cosmos bipinnatus

Xanthos

Xanthos, a yellow statement in compact Cosmos

Xanthos means yellow in Greek and that's what this new *Cosmos bipinnatus* is all about: its **unique, soft, stunning yellow** colour. Xanthos is **dwarf, early flowering and uniform**, turning yellow into a professional product. This rich-flowering *Cosmos* is ideally suited for the patio and terrace and is a true eye catcher in the border. Xanthos adds a completely new colour to the compact *Cosmos* range. An absolute breakthrough in breeding!

Entries in the Fleuroselect trials that score highly on beauty, innovation, use and garden performance are granted a Gold Medal. This prestigious award symbolizes a genuine improvement in breeding. The jury was unanimous that the **achievement in introducing soft yellow into compact Cosmos** is truly exceptional and gave this newcomer almost full marks. *Cosmos bipinnatus* Xanthos, an absolutely outstanding 2016 Gold Medal!

Cosmos bipinnatus *Xanthos*

Market value

Xanthos is a real treat for the grower as it is **more dwarf and uniform**. The plants are well branched and also very suitable to grow as a pot plant. Thanks to its compactness, Xanthos is ideal for transport. Retail will rave over this newcomer as Xanthos adds a new colour in the compact Cosmos range. The **short production time** will make this beauty an early-season, top attraction on the garden center shelves. Cosmos lovers will simply adore the soft yellow colour and the outstanding garden performance. Xanthos, a revolution for the compact Cosmos market.

Background information

Cosmos bipinnatus, commonly called the **garden Cosmos** or **Mexican aster**, is a medium-sized flowering herbaceous plant native to Mexico. The species and its varieties and cultivars are popular as an ornamental plant in temperate climate gardens. With Xanthos, Van Hemert & Co has created a *Cosmos bipinnatus* that is truly unique in its soft yellow colour.
